## 检索规则

### 布尔逻辑

#### 支持布尔逻辑运算 ( AND、OR、 NOT )

plastic bottles OR water pollution  
"plastic bottles" AND "water pollution"

### 截词检索

#### 截词符 “\*” “?”

\* : 0-N个字符, Bacter\* 检出bacteria、bacterium

? : 单个字符, wom ? n 检出woman和women

### 词组检索

#### 词组运算符 : “ ”

“system management”, 只检索到system management词组, 检索不到system self-control manager短语

### 邻近检索

**NEAR** : 表示两词之间最多相隔0-5个词, 词序可以颠倒, 若希望词序不颠倒可将检索式用引号括起, 如: “system near manager”

**ONEAR** : 表示两词之间相隔一个词。

### Background

With the rapid economic development in China, the Chinese healthcare system has seen significant improvements. However, tough challenges remain in the treatment of stroke, the leading cause of death and disability in China [1]. Although stroke is a global epidemic, about 85% of all stroke deaths are registered in low- and middle-income countries, and patients in these countries also account for 87% of total stroke-related losses in terms of disability-adjusted life years [2]. For example, in China, stroke morbidity is 89.6–314 out of every 100,000 males and 76.7–212.2 out of every 100,000 females. The mortality from stroke in urban areas is 127.96 out of every 100,000 people, and in rural areas 115.2 out of every 100,000 people [3].

Poor control of vascular risk factors and limited access to acute and primary care are the most common reasons for the high mortality and rate of disability after stroke.
